12th May 2009

Dear Rebekah,

It is now over a year since we installed the Vickers V16 Energy Management System and having kept track of all the costs, Kwh usage and increases in the cost of gas over this period we know just how well the system has performed in reducing costs.

It is easy to make bold statements about being able to reduce costs, but to back them up with a monetary refund if you failed to make the savings shows absolute confidence in your product. It also made it easy for us to sell the Capital Expenditure to corporate.

Without doubt this system has performed exactly as specified and has reduced our Kwh usage by 34% during the year it has been operational. The savings would have been significant had the cost of gas had stayed the same, however, even taking into account the increases in gas prices during the course of 2008 we have actually paid less for heating than we did in 2007.

Had we not installed the system our heating costs 2007 to 2008 would have increased by over 50%, with the Vickers EMS installed our actual costs went down by 13%.

This is a pretty impressive testament to the Vickers EMS and one of the best cost savings we have made.

Yours faithfully

Brian F Haines
